

Concours Excellence Advisory

Since 1986, **KUKUK**Ingenieure have stood for scientifically sound, independent vehicle assessment at the highest international level. Our expertise combines technical precision with in-depth knowledge of the concours world. Since 2018, Laura Kukuk von Glahn has been a judge at top international concours events from Pebble Beach to Villa d'Este.

This combination of in-depth technical inspection and active judging experience gives us a unique perspective: We don't just know how a vehicle is inspected. We know how it is evaluated. Our approach goes far beyond cosmetic preparation.

We analyze your vehicle using engineering methodology, evaluate it from a jury perspective, and develop a strategic roadmap for your concours success.

In doing so, we always remain independent as an engineering firm with a clear liability structure, not as a dealer or restorer.

Five Pillars of Concours Excellence

Concours preparation is not a cosmetic process. It is a structured, evidence based analysis with clearly defined objectives. We combine engineering science with jury experience, restoration management, documentation architecture and communicative preparation.

Originality

Verification of authenticity through number comparison, material analysis and historical research. Every component is examined for period correctness.

Historical Rigor

Seamless documentation of the vehicle's history with reliable sources. Plausibility assessment of provenance and restoration measures.

Technical Plausibility

Non destructive testing methods to validate assemblies, surfaces and materials. Modern measurement technology meets historical understanding.

Jury Expectation Management

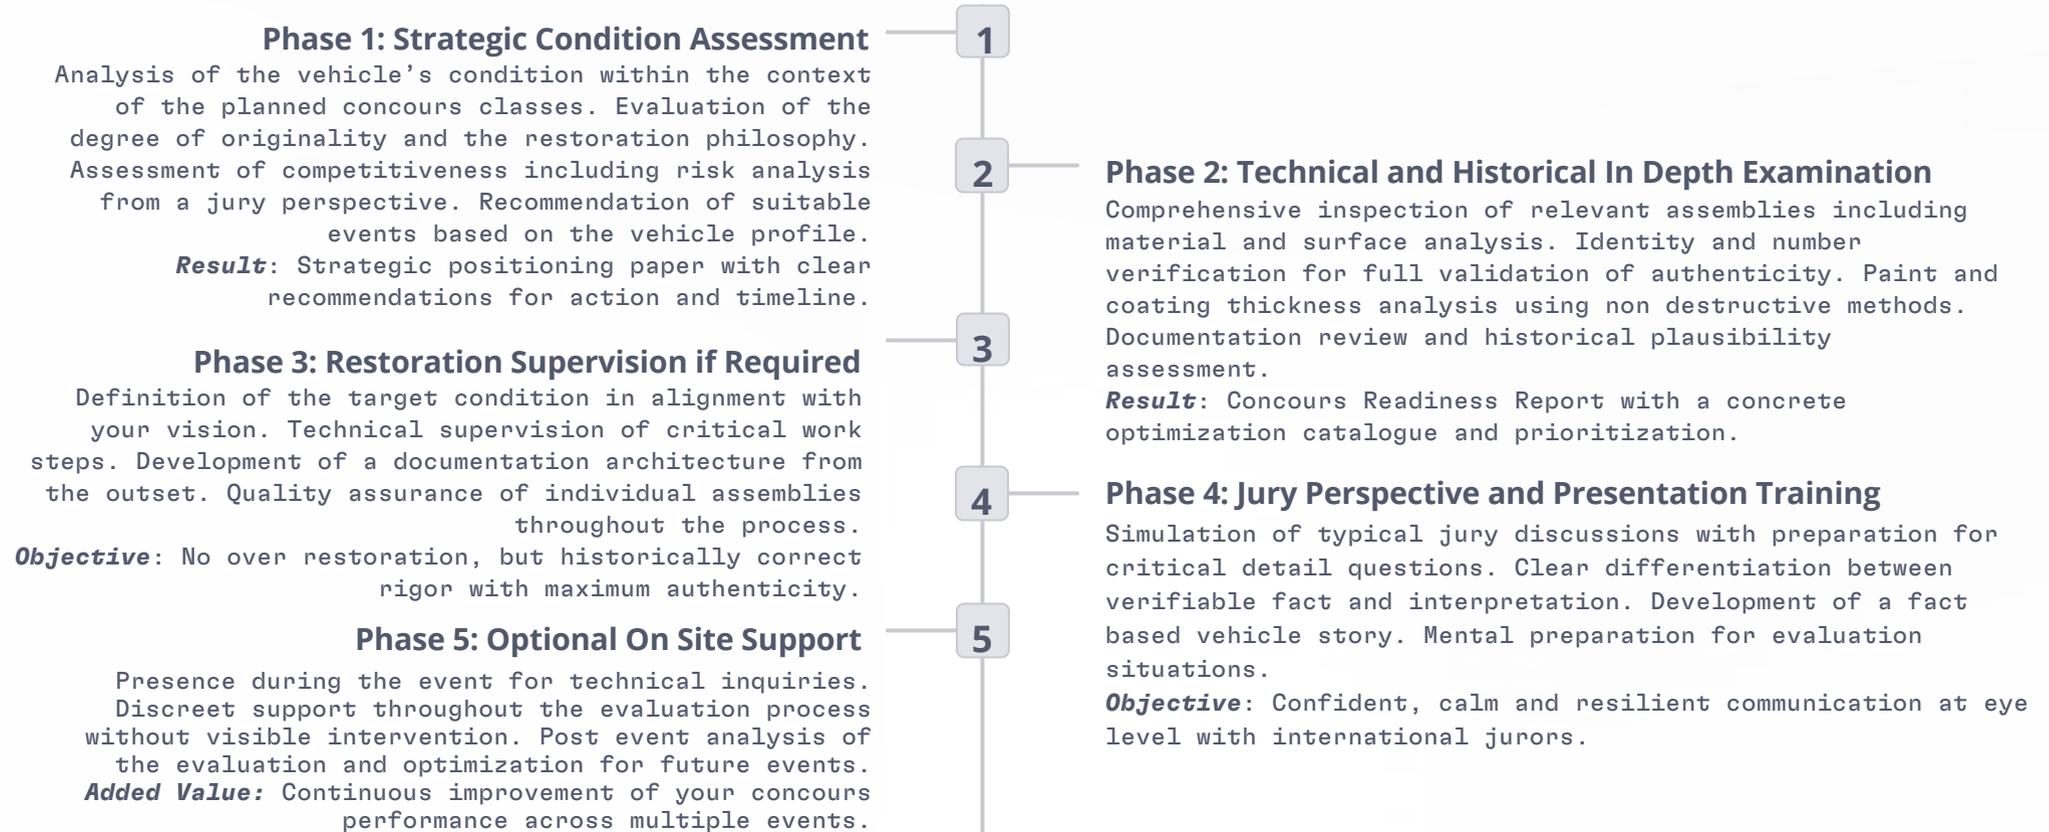

Anticipation of critical questions based on current jury experience. Preparation aligned with international evaluation standards.

Presentation Sovereignty

Development of a fact based vehicle story. Training for confident communication at eye level with jurors.

The Structured Path to Concours Success

Our five phase process model systematically guides you from strategic positioning to on site event support. Each phase builds upon the previous one and can be individually adapted to your objectives.

OUR DIFFERENTIATING FACTOR

A *Concours* is not a stage for speculation, it is a test bench for *integrity*.

Why **KUKUK**Ingenieure?

Our role is independent. We do not act as dealers or restorers, but as an engineering office with a clear liability structure and scientific methodology.

Concours success is not based on shine. It is based on verifiable correctness.

This independence is our greatest asset: we have no financial interest in the sale of parts or services.

Our sole motivation is the precise, honest evaluation of your vehicle and its strategically optimal positioning within the competition.

Your Next Steps

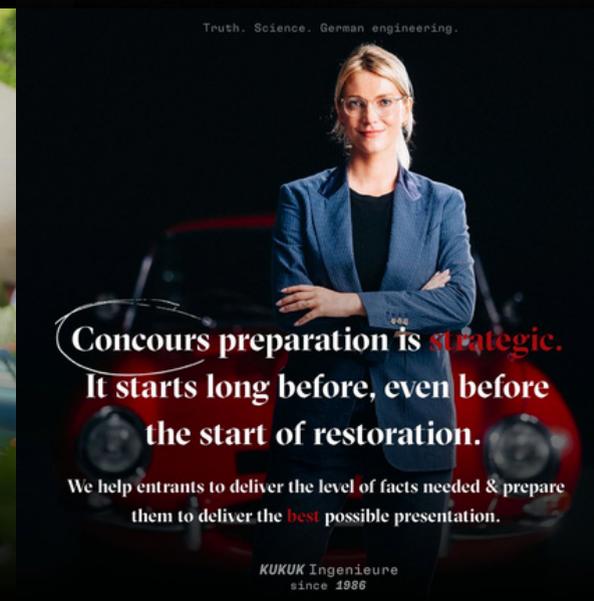

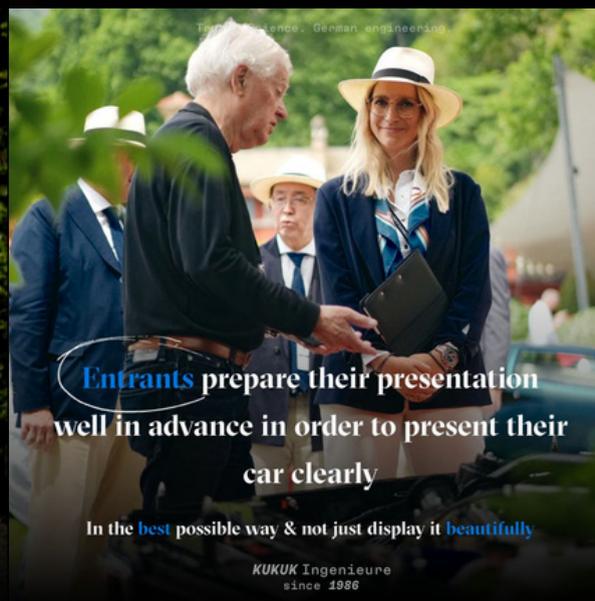

A tailored proposal follows an initial consultation and review of your documentation. Together, we discuss your objectives, assess the current condition of your vehicle, and develop a customized strategy.

If you plan to position your vehicle at an international level, we support you in a structured, discreet, and scientifically grounded manner: from the initial analysis to the event itself, drawing on over 40 years of expert activity and the insider perspective of 8 years of active international jury experience.

- Schedule a non binding consultation to discuss your project. We treat all information with strict confidentiality and work with you to develop a realistic assessment of your concours opportunities.**

Excellence does not arise by chance.

It is the *result* of precise planning, well founded expertise, and consistent execution. Let us accompany your vehicle on this path.

Treten Sie mit uns in Kontakt um das Unsichtbare in das Unbestreitbare zu verwandeln.

Laura is serving as jury member at various international Concours Events since 2018
